

Kornit Digital Expands Textile Market Reach; Will Unveil Vulcan at ITMA 2015

September 30, 2015

Vulcan Expands Direct-to-Garment Addressable Market to Include Medium-to-Long Runs

ROSH-HAAYIN, Israel, Sept. 30, 2015 (GLOBE NEWSWIRE) - Komit Digital, (NASDAQ:KRNT), a worldwide market leader in digital textile printing, has announced that it will present its new high-productivity, low-cost-per-print Vulcan system at ITMA 2015, taking place November 12-19 in Milan.

Komit's new Yulcan is a digital platform that for the first time rivals screen printing for mid-to-long runs, due to its extraordinary speed and ink efficiency. Company's current systems, Vulcan users can reduce the cost per print by up to 40%. With the Komit Vulcan, more textile printers and garment decorators can benefit from digital printing advantages which include drastically reduced tumeround times, mass customization capabilities and the elimination of setup costs, coupled with significantly reduced labor and manufacturing space.

Komifs new direct-to-garment flagship will be the fastest direct-to-garment printing system in the market, capable of producing up to 250 high quality garments per hour, with dark and light garments printed at the same speed. This marks a significant increase of productivity at more than double the effective throughput of previous Komit systems. The Vulcan will produce excellent photorealistic quality, featuring 60 new-generation print-heads with an advanced recirculating ink system in a six-color-plus-white configuration. The system caters for multiple print sizes and configurations with a maximum print size of 70x100 cm / 27.5x39.5 in. Like all other Komit systems, the Vulcan was developed around the company's unique NeoPigmentTM planted printing process. Komit's own water-based inks work on a variety of fibers (natural, man-made and blends) and allow for inline-pretreatment. For the new system, the ink will be shipped in 4 liter bottles. After printing, garments are cured with a standard hot-air dyer. The inks are Oeko-Tex 100 certified and GOTS pre-approved.

Older Kraft, Komin's VP of Product Development, commented: "The Komit Vulcan significantly expands the addressable market for digital direct-to-garment printing by offering a true alternative to large scale screen printing manufacturing. Given the continued trend towards large scale manufacturing of relatively small batches of discrete designs. Komit made the decision to create a first of a kind versatile system able to run small, medium and large batches at extremely high speed and with an easy-to-use user interface. With its incredibly low printing cost per print, its the most cost-efficient way to produce quantities beyond 100 shirts per print run, while being capable of customizing each shirt. The Vulcan felter an optimal competitor deglial such offers an optimal solution for existing environmental steps in our mission to deliver environmental steps in our tent of the state of the printing of

Kornit will be launching multiple beta sites and evaluations of the system over the coming months and expects general market availability by the middle of 2016.

The new system will be presented as a technology preview at ITMA during scheduled demonstrations. Kornit welcomes registrations either online at http://kornit.insiders.website/lime/ or during the show. Also on the booth will be Kornit's 1.80 m roll-to-roll printer Allegro, which allows for the shortest time from file to finished fabric, an Avalanche Hexa six-colors-plus-white direct-to-garment printer and an Avalanche DC Pro, the only digital, industrial discharge printing system.

Booth number: Hall 18, B 113.
